Research Interests

Visual Generation and World Modeling, Unified Multimodal Models, Diffusion and Autoregressive Modeling, Representation Learning, Long-tail Learning, Interpretability

Experience

Senior Research Scientist, Apple Inc. Jul 2023 – Present
Tech lead, image and video generation foundation models

- Led pretraining of large-scale image and video generation models from scratch: model design, ablation design, scaling, parametrization, and establishing the training recipe, curriculum, and compute allocation.
- Led scaling of the base model behind ADM 3 Cloud (Apple Diffusion Model), powering Image Playground and Photos editing tools such as Spatial Reframing in Apple Intelligence.
- Co-led post-training of the video generation model: supervised fine-tuning (data curation, recipe), multi-round reinforcement learning and preference optimization, evaluation pipeline, and timestep distillation.
- Designed and trained latent representations (VAEs) for diffusion model training.
- Cross-functional collaboration bridging research and product; mentoring junior researchers.
- Related team publications: DiT-Air (2025), STIV (ICCV 2025).

Machine Learning Research Engineer Intern, Scale AI Jan 2021 – Apr 2021
Data annotation automation via 2D/3D computer vision on autonomous vehicle data

Graduate Researcher, Oregon State University Jan 2018 – Jun 2023

- Generative modeling: long-tail class-conditional GAN training via unconditional sharing at low resolution, and counterfactual synthesis by latent transformations of pretrained generators. Two first-author CVPR papers (2022, 2024).
- Interpretability of vision and RL models: optimization-based attribution for CNNs, transformers, and detectors; finite-state abstractions of recurrent policies. AAAI 2020, ICML 2021, BMVC 2023, CVPR 2024 oral and best student paper runner-up.

Education

Oregon State University, Ph.D. and M.Sc., Computer Science
Thesis: "Generative Models Meet Explainable AI and Long-Tail Learning: from Attribution Maps to Image Synthesis" — Adviser: Fuxin Li

Amirkabir University of Technology, B.Sc., Electrical Engineering
— Minored in Mathematics
— Top 0.1% in the national university entrance exam

Selected Publications

Professional Services

- Reviewer for ICLR, ICML, NeurIPS, CVPR, and ECCV.

Coding And Tools

- Claude Code, Codex; PyTorch (FSDP, context/sequence/expert parallelism), Python, JAX, Git, AWS, Kubernetes, Docker.
